USE OF AI

We used the AI in our assignment only where we were allowed by the Professor's instructions.

More specifically, we adopted AI in order to have a support to our coding activity and to help us creating specific pieces of codes, which were relatively complicated ,both in Python and R. We believe that the AI tool was useful in our assignment because we worked with it in a complementary manner, in the sense that it allowed us to transform our statistical ideas, a skill we have developed more than programming, of which we have only a medium knowledge. It also allowed us to understand which tasks are more appropriate to do in Python and which in R, which we consider more suitable for statistical analysis, given its clean syntax.

However, we have analysed the output of the AI in a critical way and we did not trust it a-priori.
